

2-Way IP Intercom

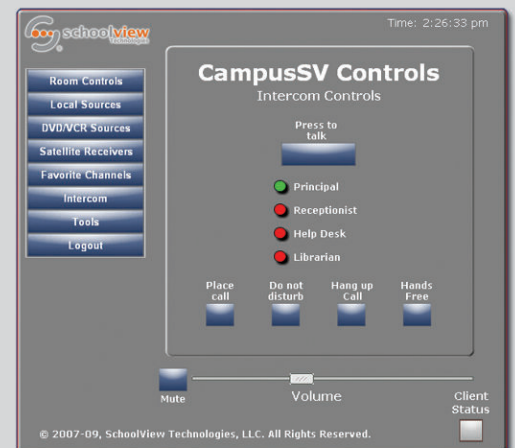

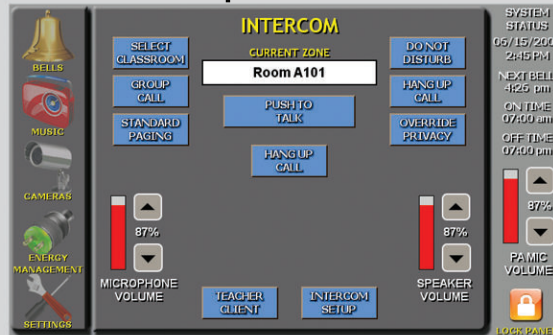

Twenty-first century schools use technology to drive efficiency, safety and improved teaching and learning. And while the past decade has seen dramatic changes in education technology both inside and outside the classroom, each advancement has typically brought with it a new system, new procedures and new challenges. CampusSV® software, from SchoolView Technologies, is a complete, scalable solution that consolidates management and control of diverse school technologies at the district, building and classroom level, on a single, comprehensive platform. Our network-based approach modernizes traditional bell, clock and PA systems, while addressing the management and control needs of classroom audio, video and presentation tools.

2-Way Intercom Module

Add functionality with our 2-Way IP Intercom module to allow classrooms to respond directly to a call from the front desk, principal's office, nurse's office or other predetermined locations. A simple wall plate allows for various locations to be selected to call. The volume knob can also be used as a push-to-talk button. Additional settings allow for hands free operation. When interfaced with our Classroom Control module a host of other features are available.
