

# Energy Management

Twenty-first century schools use technology to drive efficiency, safety and improved teaching and learning. And while the past decade has seen dramatic changes in education technology both inside and outside the classroom, each advancement has typically brought with it a new system, new procedures and new challenges. CampusSV® software, from SchoolView Technologies, is a complete, scalable solution that consolidates management and control of diverse school technologies at the district, building and classroom level, on a single, comprehensive platform. Our network-based approach modernizes traditional bell, clock and PA systems, while addressing the management and control needs of classroom audio, video and presentation tools.

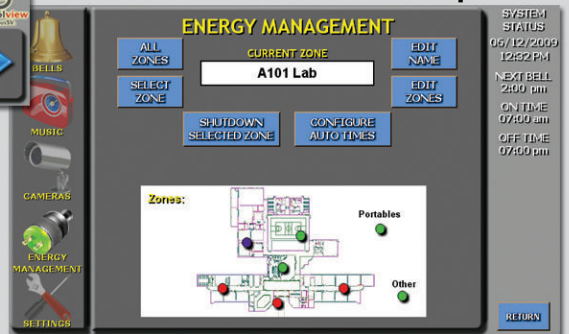

## Energy Savings Module

Did you know a school with about 200 PCs left in sleep mode overnight during a typical school year will still consume approximately \$3,000.00 of power. By including this module, you will have complete control of which PCs are powered down and when. Set up a viturally unlimited number of zones, each with their own power down times. Additionally, prior to powering down, each PC will display a pop-up prompt to allow a teacher or student the ability to request more time.
