

Power-Over-Ethernet (POE)

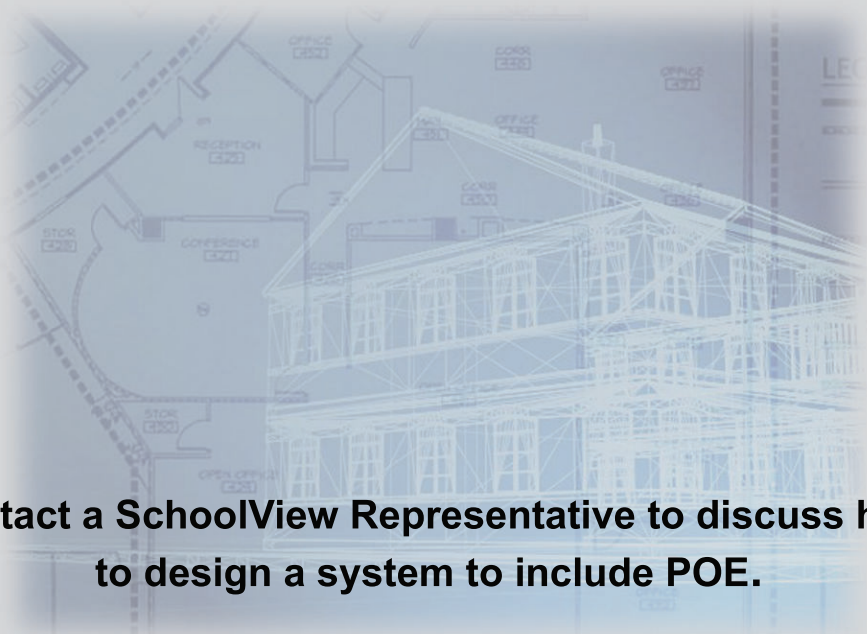

Twenty-first century schools use technology to drive efficiency, safety and improved teaching and learning. And while the past decade has seen dramatic changes in education technology both inside and outside the classroom, each advancement has typically brought with it a new system, new procedures and new challenges. CampusSV® software, from SchoolView Technologies, is a complete, scalable solution that consolidates management and control of diverse school technologies at the district, building and classroom level, on a single, comprehensive platform. SchoolView's network-based approach modernizes traditional bell, clock and PA systems, while addressing the management and control needs of classroom audio, video and presentation tools.

System Design

A SchoolView system can operate with full battery backup to provide essential communications in a power outage situation. Additionally, isolating the system network from the campus network can insure system operation during network down time.

No more running up and down the halls with a bull horn to make emergency announcements or signal a class change simply because power is lost, the network is offline or both.

Contact a SchoolView Representative to discuss how to design a system to include POE.

Available for CampusSV® and CampusPA
