

Security Integration

Twenty-first century schools use technology to drive efficiency, safety and improved teaching and learning. And while the past decade has seen dramatic changes in education technology both inside and outside the classroom, each advancement has typically brought with it a new system, new procedures and new challenges. CampusSV® software, from SchoolView Technologies, is a complete, scalable solution that consolidates management and control of diverse school technologies at the district, building and classroom level, on a single, comprehensive platform. Our network-based approach modernizes traditional bell, clock and PA systems, while addressing the management and control needs of classroom audio, video and presentation tools.

Security Module

Add IP based motion JPEG networked cameras to the touch panel. View full or quad screens. Add, remove or update cameras via the intuitive touch panel interface. In addition, this module will allow for contact closures for MP3 door bells and access control to remotely open doors. Panic buttons in each classroom can be included in the design which will trigger MP3 alarm tones in the front office or campus wide. Receive E-mail alerts when a alarm is triggered. Projector alarms include a visual alert on the touch panel to pinpoint exactly where the event is occurring, an audio alert anywhere on campus, and an e-mail alert to selected recipients.
