

Emergency Alerts

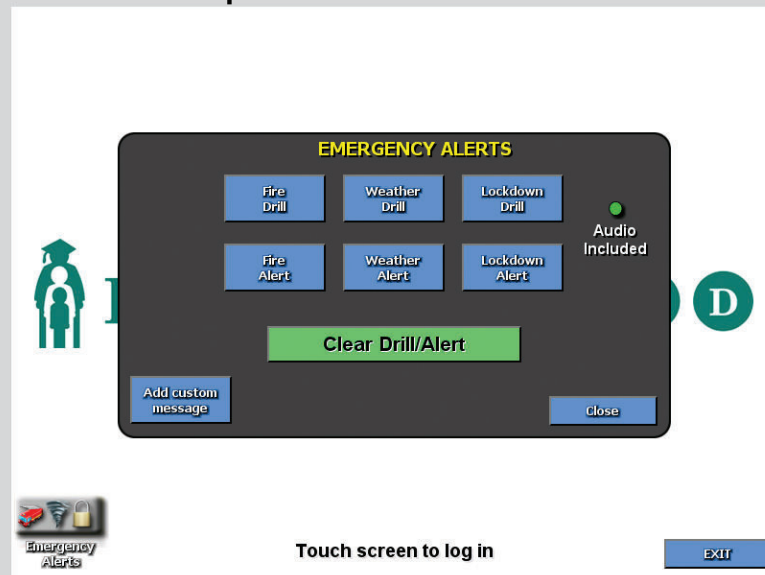

Twenty-first century schools use technology to drive efficiency, safety and improved teaching and learning. And while the past decade has seen dramatic changes in education technology both inside and outside the classroom, each advancement has typically brought with it a new system, new procedures and new challenges. CampusSV® software, from SchoolView Technologies, is a complete, scalable solution that consolidates management and control of diverse school technologies at the district, building and classroom level, on a single, comprehensive platform. Our network-based approach modernizes traditional bell, clock and PA systems, while addressing the management and control needs of classroom audio, video and presentation tools.

Emergency Alert Module

In the event of an emergency, (Lockdown/Weather/Fire) this module can power on all projectors & flat panels and show an alert graphic with a custom text crawl with information specific to the emergency. An all clear graphic is displayed when the Alert is cancelled returning the displays to their previous state. This module does not replace life safety systems, it is designed to compliment such systems through a user-friendly interface.
